Brown coloured chews with the look, taste and smell of chocolate.

4 CLINICAL PARTICULARS

4.1 Therapeutic indication

CRECHE GUARD PROBIOTIC IMMUNE CHOC CHEWS provide essential vitamins and minerals for the maintenance of good health and to support normal growth and development in children.

CRECHE GUARD PROBIOTIC IMMUNE CHOC CHEWS contain HOWARU[®] Bifido B. lactis HN019[™] which is a probiotic. When ingested on a regular basis, probiotics should improve or normalize the microbial balance in the human intestines and thereby improve the functioning of the digestive tract/gut.

4.2 Posology and method of administration

Children 2 years and older: Chew one chocolate bar daily after food, or as recommended by a healthcare provider.

4.3 Contraindications

- Patients who are hypersensitive to any of the ingredients, including the excipients.
- Children under the age of 2 years.

4.4 Special warnings and precautions for use

CRECHE GUARD PROBIOTIC IMMUNE CHOC CHEWS contain sugar. This may have an effect on the control of blood sugar in patients with diabetes mellitus.

4.5 Interaction with other medicines and other forms of interaction

No interaction studies were performed.

4.6 Fertility, pregnancy and lactation

CRECHE GUARD PROBIOTIC IMMUNE CHOC CHEWS is not recommended for use during pregnancy and lactation as safety has not been demonstrated.

4.7 Effects on ability to drive and use machines

The effects on ability to drive and use machines has not been studied.

4.8 Undesirable effects

No data available.

4.9 Overdose

Symptoms of overdosage include stomach upset, nausea, diarrhoea or constipation.

Treatment is symptomatic and supportive.

5 PHARMACOLOGICAL PROPERTIES

5.1 PHARMACOLOGICAL CLASSIFICATION

Complementary Medicines: Health Supplement
D34.12 Multiple substance formulation

5.2 PHARMACOLOGICAL ACTION

- The B Vitamins help to metabolise carbohydrates, fats and proteins, contribute to normal psychological function, normal functioning of the nervous system, maintenance of normal mucous membranes, maintenance of normal skin and the reduction of tiredness and fatigue.
- Calcium contributes to normal muscle function and helps in the development of healthy bones and teeth.
- Iodine contributes to normal cognitive function, nervous system function, and to normal growth and development.
- Iron contributes to normal formation of red blood cells and haemoglobin and their proper function, normal oxygen transport in the body, cognitive function and immune system function.
- Vitamin C is an antioxidant which contributes to cell protection from free radical damage, helps in the development and maintenance of bones, cartilage, teeth and gums and helps with connective tissue formation.
- Vitamin D contributes to normal immune function, maintenance of normal muscle function, cell division, and the development and maintenance of strong bones and teeth.
- Vitamin E functions as a tissue antioxidant thereby maintaining healthy cells.
- Zinc is an essential element which contributes to the maintenance of immune function and the maintenance of normal skin.
